Problem Statement

The objective of this project is to develop blood bank management system, designed to handle the daily transaction of the blood bank and to search details when required. It also helps to register the details of blood doners, blood collection details as well as blood issued reports

Problem Description

The project aims at maintaining the information pertaining to blood donors, different blood groups available in the blood bank and help them manage in a better way, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. When a person wants to donate blood, he has to register by giving information like blood group, contact details etc.

Blood Bank management system can lead to error-free, secure, reliable and fast management systems.

Requirements

High Level Requirement

ingh bever kedan ement				
ID	Description			
H01	To manage the operations of the blood bank			
H02	To maintain the database of the donors			

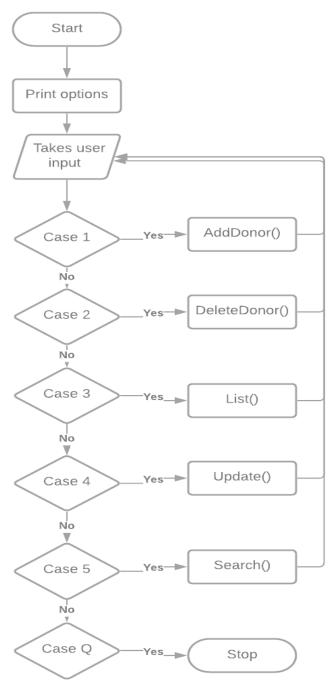

Low Level Requirements

ID	Description
H01_L01	To add a new donor to the database
H01_L02	To modify the details of an existing donor
H01_L03	To search for a donor
H02_L04	To list the donors in the database
H02_L05	To delete a particular donor
